

Shweta Agarwal

Batch 2006

British Heart Foundation Research Excellence Scholar

**Pursuing Ph.D. in Material Science at Imperial College,
London**

I am honoured to be the part of Birla Balika Vidyapeeth community and truly feel blessed to have been taught by some of the best teachers in the world. I am thankful for all the guidance, life-long friendships and an enthusiastic environment that was bestowed upon me during my time at Vidyapeeth, which helped me develop the confidence to achieve high goals in life.

After my time at Vidyapeeth, I completed my undergraduate in Biomedical Engineering at the University of Northern Ireland where I was recognized as Best Student for four years and achieved several awards for my academic and leadership prowess. I also had some of the great opportunities including study and work at Harvard Medical School, Boston and Utrecht University, The Netherlands. Currently, I am studying for Ph.D. in Material Science at Imperial College London as a British Heart Foundation Research Excellence Scholar and also acting as an Associate at Need for Nutrition Education/Innovation Programme (NNEdPro) between India and the UK at the University of Cambridge.

I truly appreciate the role of Vidyapeeth teachers who helped build the strong foundation of positive attitude, hard work, and professionalism that was required to excel the challenges as I began my career. Your encouragement and support have made all of the difference. Thank you."
